

FlexTRADER EMS

FlexML

Access Machine Learning derived real-time market impact analytics

FlexTrade's innovative market impact analytics deliver the unique and actionable insights trading teams need to help improve decision-making in a constantly changing competitive market environment.

Developed by FlexTrade's Data Science team, the new analytics solution is generated by applying a proprietary neural network model to a large corpus of order data to help investment managers understand the performance of their execution strategies.

Unique insights generated by proprietary modelling data

FlexTrade's proprietary model has been created using machine learning modelling, vast data cleansing of client order data, as well as the ongoing normalisation of more than 1,000 algos and 5,000 parameters across over 100 brokers.

Increased agility - Adjust execution strategies in real-time

Traders can see an estimate of their current and realized market impact in real-time, meaning strategies can be monitored and adjusted automatically based on market conditions.

Improve speed of trading decision-making via actionable analytics

Leverage data visualization to understand how the market impact changes over the life of the order, including any increases or decreases as more volume is traded or when an order is finished or paused.

Optimize efficiency - Automation and in-flight alerts

Automation can be applied to data, including generating in-flight alerts based on user defined thresholds, to provide increased control and efficiency on trading performance.

Enhanced transparency - Holistic view of pre- and post-trade data

Deeply integrated directly within the FlexTRADER EMS order blotter, analytics can be viewed holistically alongside third-party analytics to deliver increased transparency, improved trading decision-making and assist with best execution obligations.
